(No Moving Parts)**P33 Series Outdoor**

(Other Models Available)

Description:**Standalone Colour IP Cameras with Built-in Movement Detection.**

Unlike many security cameras these cameras are completely standalone and do not require any PC at the remote site. Live images can be viewed using standard browser software.

When triggered by built in movement detector or external trigger i.e. door sensors, or PIR's recorded images can be sent to remote servers or PC's. (no images need to be stored at camera site) Video Motion Detection enables images to be uploaded when there is activity in specific areas of the video image.

Alarm notification can also be sent by email or integrated with BTI's monitoring systems to be forwarded on by SMS text message.

Power over Ethernet (PoE) enables the camera to be powered directly from the network cabling for easy installation.

Axis Camera Station (ACS)

Comprehensive video management software for monitoring, recording, playback and event management

AXIS Camera Station is a comprehensive video management software that is specially designed for Axis network cameras and video servers. From remote video monitoring and recording to advanced event management, from superior image quality to effective evidence, AXIS Camera Station offers advanced capabilities for your video surveillance needs.

High quality recording

With AXIS Camera Station installed on your Windows PC, you can monitor your cameras, and at the same time, record high quality, digital video either continuously or on schedule, alarm and/or motion detection. The software's motion detection feature works by retrieving an image several times every second and comparing the differences in a specified area of the image.

AXIS Camera Station supports recordings in both Motion-JPEG and MPEG-4 for optimized quality and bandwidth. Digital recordings are saved directly onto the hard disk(s) of the local PC server running AXIS Camera Station.

Remote access and multi-view playback

AXIS Camera Station offers easy ways to search for recorded events. In addition, with the multi-view playback feature, users can view simultaneous recordings from different cameras and get a comprehensive picture of an event. Remote viewing and playback are possible with the use of a web browser or with the AXIS Camera Station's Windows client.

Features:

- View and record live video from multiple cameras simultaneously.
- Display up to 50 cameras
- Multiple recording modes: continuous, scheduled or alarm.
- High quality recordings in MPEG-4 and Motion JPEG
- Multiple search functions for recorded events.
- Remote access via web browser or Windows client
- Control of PTZ and dome cameras using mouse or joystick
- Alarm alert functions (sound, e-mail and Email to SMS)
- Full duplex, real-time audio support
