

Digital Temperature & Analog Sensor

Monitor ambient temperature plus an additional analog sensor in real time.

RMA-DTA-SEN

We've got facilities covered.

The Digital Temperature & Analog Sensor monitors ambient indoor temperature and status of a connected analog sensor, including third-party sensors, in real time. For example, connect a Current Loop Sensor to an AC unit and to the Digital Temperature & Analog sensor to get temperature readings plus power consumption of your AC to determine cooling efficiency.
